Art Unit: 2632

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, 16-20-24, 31-35, 46-57, 63, 66, 67 and 68 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith (US 6,133,836) in view of Elberty et al. (US 6,084,512).

Regarding claim 1: Smith discloses a wireless communication device includes a substrate (18); a communication circuitry (54) of the integrated circuit coupled to the substrate and configured to receive a wireless signal including the identification signal; to process the identification signal of the wireless signal and to output a control signal responsive to the processing of the identification signal; wherein the communication circuitry is configured to output another wireless signal including backscattering electromagnetic energy received by the radio frequency identification device (col. 3, lines 21-51; col. 5, lines 20-60). Smith does not disclose an indication circuitry. Elberty discloses a radio frequency identification device includes an indication circuitry coupled to the communication circuitry for receiving and indicating the presence of the radio frequency identification device (col. 4, lines 21-24; col. 5, lines 23-49; Figs. 1, 5). At the time of the invention, it would have been obvious to one of ordinary skill in the art to

Art Unit: 2632

utilize an indication device as taught by Elberty et al. in a system as disclosed by Smith for indication the received signal and for visually signaling to the user that the signal has been physically been received.

Regarding claim 2: Elberty et al. discloses the indication circuitry includes a light emitting device (518) configured to emit a human visible signal to indicate the presence (col. 10, lines 45-48).

Regarding claim 3: Elberty et al. discloses the wireless signal includes data and the communication circuitry is configured to output the control signal comprising the data (col. 10, lines 24-48).

Regarding claim 4: Elberty et al. discloses the communication circuitry is configured to output a wireless signal (col. 4, lines 21-25; col. 5, lines 23-49; Fig. 5).

Regarding claim 16: Smith discloses a wireless communication device includes a substrate (18); a communication circuitry (54) of the integrated circuit coupled to the substrate and configured to receive a wireless signal including the identification signal; to process the identification signal of the wireless signal and to output a control signal responsive to the processing of the identification signal; wherein the communication circuitry is configured to output another wireless signal including backscattering electromagnetic energy received by the radio frequency identification device (col. 3, lines 21-51; col. 5, lines 20-60). Smith does not disclose an indication circuitry. Elberty discloses a radio frequency identification device includes an indication circuitry coupled to the communication circuitry for receiving and indicating the presence of the radio frequency identification device (col. 4, lines 21-24; col. 5, lines 23-49; Figs. 1, 5). At the

Art Unit: 2632

time of the invention, it would have been obvious to one of ordinary skill in the art to utilize an indication device as taught by Elberty et al. in a system as disclosed by Smith for indication the received signal and for visually signaling to the user that the signal has been physically been received.

Regarding claim 17: Elberty et al discloses the indication circuitry includes a light emitting device (518) configured to emit a human visible signal to indicate the presence (col. 10, lines 45-48; Fig. 5).

Regarding claim 18: Elberty et al. discloses the wireless signal includes data and the communication circuitry is configured to output the control signal comprising the data (col. 10, lines 24-48).

Regarding claim 19: Elberty et al. the communication circuitry is configured to output a wireless signal (122) (col. 4, lines 21-25; col. 5, lines 23-49; Fig. 5).

Regarding claim 20: Elberty et al. discloses a battery coupled with the communication circuitry and the indication circuitry (Fig. 5, col. 11, lines 1-6).

Regarding claim 21: Smith discloses a wireless communication device includes a substrate (18); a communication circuitry (54) of the integrated circuit coupled to the substrate and configured to receive a wireless signal including the identification signal; to process the identification signal of the wireless signal and to output a control signal responsive to the processing of the identification signal; wherein the communication circuitry is configured to output another wireless signal including backscattering electromagnetic energy received by the radio frequency identification device (col. 3, lines 21-51; col. 5, lines 20-60). Smith does not disclose a plurality of radio frequency

Art Unit: 2632

devices. Elberty et al. discloses an identification system comprising an interrogator (100) configured to output a wireless signal (118, 120) to identify at least one of a plurality of radio frequency identification devices (500); plural radio frequency identification devices (500) individually configured to receive the wireless signal (118, 120) and to selectively emit a human perceptible signal (518) to indicate presence; and wherein only the at least one radio frequency identification device identified by the wireless signal is configured to output the human perceptible signal responsive to receiving the wireless signal (col. 4, lines 5-25, 48-67; col. 5, lines 1-8; col. 10, lines 24-48). At the time of the invention, it would have been obvious to one of ordinary skill in the art to utilize a plurality of radio frequency devices as taught by Elberty et al. in a system as disclosed by Smith for monitoring a group of identification devices in the monitoring environment.

Regarding claim 22: Elberty et al. discloses the radio frequency identification devices (500) individually include a light emitting device (518) configured to emit a human visible signal to indicate presence (col. 10, lines 45-48).

Regarding claim 23: Elberty et al. discloses the wireless signal (120) includes an identifier and the at least one radio frequency identification device is configured to indicate presence responsive to the identifier (col. 5, lines 23-30; col. 10, lines 45-48).

Regarding claim 24: Elberty et al. discloses the radio frequency identification devices are individually configured to output wireless signals (col. 4, lines 21-25; col. 5, lines 23-49; col. 10, lines 45-48).

Regarding claim 31: See the claim 1 above.

Art Unit: 2632

Regarding claim 32: Elberty et al. discloses outputting the wireless signal (118, 120) using an interrogator (100) (Figs. 1, 5).

Regarding claim 33: Elberty et al. discloses the indicating includes emitting a human perceptible signal (col. 10, lines 45-48).

Regarding claim 34: Elberty et al. discloses the indicating includes emitting a human visible signal (col. 10, lines 45-48).

Regarding claim 35: Elberty et al. discloses the wireless signal includes data and the control signal comprises the data (col. 10, lines 24-48).

Regarding claim 46: Smith discloses a wireless communication device includes a substrate (18); a communication circuitry (54) of the integrated circuit coupled to the substrate and configured to receive a wireless signal including the identification signal; to process the identification signal of the wireless signal and to output a control signal responsive to the processing of the identification signal; wherein the communication circuitry is configured to output another wireless signal including backscattering electromagnetic energy received by the radio frequency identification device (col. 3, lines 21-51; col. 5, lines 20-60). Smith does not disclose a plurality of radio frequency devices. Elberty et al. discloses an identification system comprising an interrogator (100) configured to output a wireless signal (118, 120) to identify at least one of a plurality of radio frequency identification devices (500); plural radio frequency identification devices (500) individually configured to receive the wireless signal (118, 120) and to selectively emit a human perceptible signal (518) to indicate presence; and wherein only the at least one radio frequency identification device identified by the

Art Unit: 2632

wireless signal is configured to output the human perceptible signal responsive to receiving the wireless signal (col. 4, lines 5-25, 48-67; col. 5, lines 1-8; col. 10, lines 24-48). At the time of the invention, it would have been obvious to one of ordinary skill in the art to utilize a plurality of radio frequency devices as taught by Elberty et al. in a system as disclosed by Smith for monitoring a group of identification devices in the monitoring environment.

Regarding claim 47: Elberty et al. discloses the emitting includes emitting a human visible signal (col. 10, lines 45-48; Fig. 5).

Regarding claim 48: Elberty et al. discloses the wireless signal includes data and the emitting is responsive to the data (col. 10, lines 24-48).

Regarding claim 49: Elberty et al. discloses the outputting the wireless signal includes outputting an identifier (col. 4, lines 21-25; col. 5, lines 23-49; Fig. 5).

Regarding claim 50: Elberty et al. discloses processing the wireless signal and the emitting is responsive to the processing (col. 10, lines 1-48).

Regarding claim 51: Elberty et al. discloses the communication circuitry is configured to output the control signal comprising coded signal which are obviously digital information (col. 4, lines 21-27).

Regarding claim 52: Elberty et al. discloses the communication circuitry is configured to extract digital data from the wireless signal and to output the control signal comprising the extracted digital data (col. 4, lines 21-51).

Regarding claim 53: Elberty et al. discloses an antenna (502) coupled with the communication circuitry and the control signal is configured to alter the impedance of

Art Unit: 2632

the antenna to backscatter modulate a continuous wave signal received at the antenna (col. 9, lines 41-67; col. 10, lines 1-48).

Regarding claim 54: Elberty et al. discloses the communication circuitry is configured to output a wireless signal (122) (col. 4, lines 21-25; col. 5, lines 23-49; Fig. 5).

Regarding claim 55: Elberty et al. discloses the communication circuitry is configured to output a wireless signal having data therein according to the control signal (col. 4, lines 21-25; col. 5, lines 23-49; Fig. 5).

Regarding claim 56: Elberty et al. discloses the communication circuitry comprises a processor (516) configured to execute executable instructions to process the identifier (col. 10, lines 23-48).

Regarding claim 57: See claim 51 above.

Regarding claim 63: Elberty et al. discloses the communication circuitry comprises radio frequency identification device circuitry (col. 5, lines 23-37; Fig. 5).

Regarding claims 66-68: Smith et al. discloses the another wireless signal identifies the radio frequency identification device (col. 5, lines 45-60).

Allowable Subject Matter

Claims 5-15, 25-30, 36-44, 58-61, 64 and 65 are allowed.

Art Unit: 2632

Response to Arguments

Applicant's arguments with respect to claims 1-4, 16-24, 31-35, 46-57 and 53 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Toan N Pham whose telephone number is (703)306-3038. The examiner can normally be reached on M-F.
